Call-Off App**

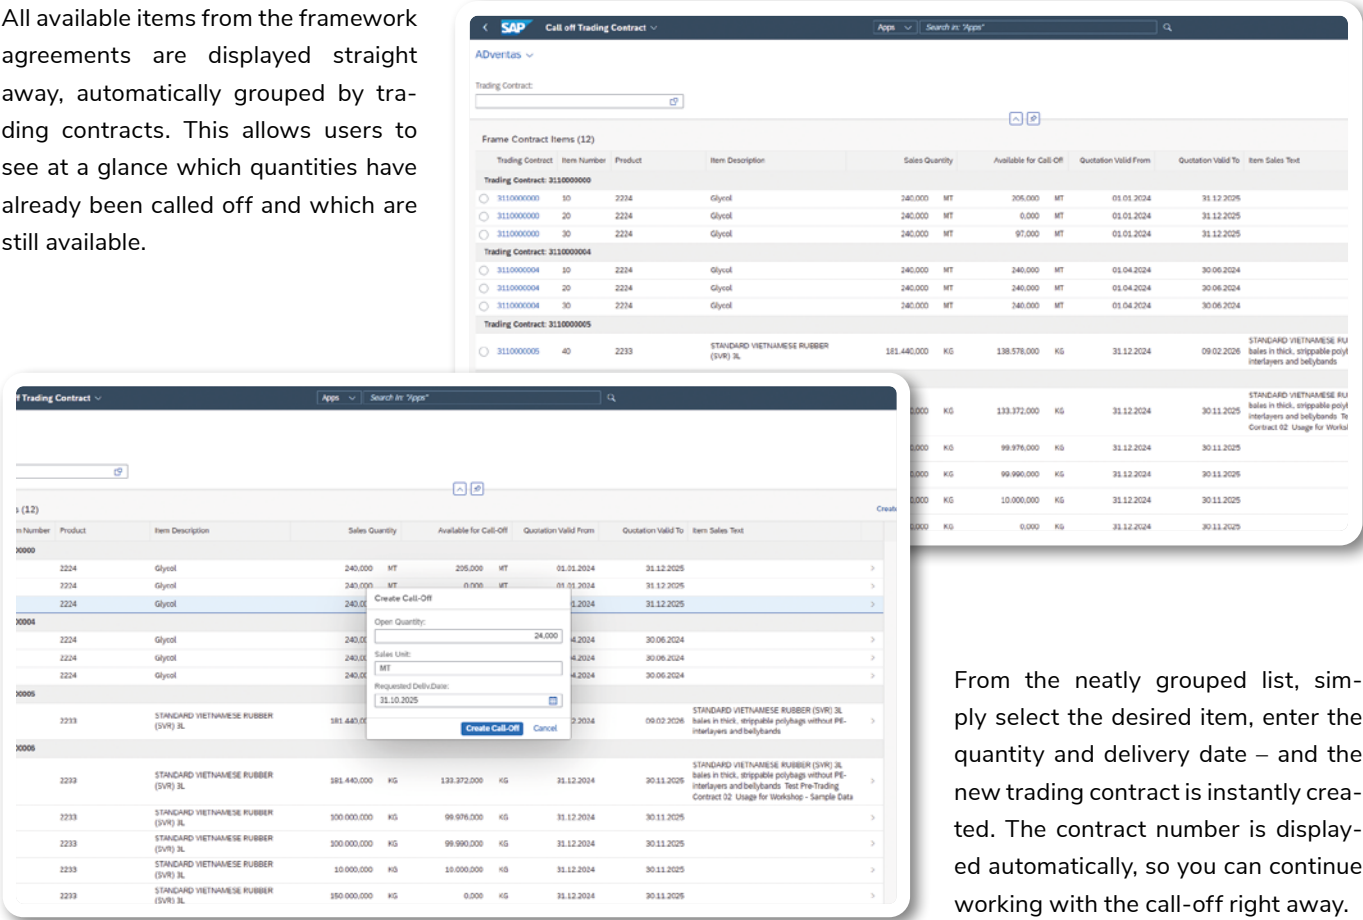

MORE SPEED, FEWER CLICKS:

Smart call-offs with the ADventas Call-Off App

In SAP S/4HANA Global Trade Management, creating call-offs can be rather tedious: multiple apps, countless clicks, and usually only possible on a desktop. With the ADventas Call-Off App, this turns into a clear, fast process: all framework agreements and remaining quantities are immediately visible and can be called off in just a few clicks, all within a single Fiori app – and on mobile.

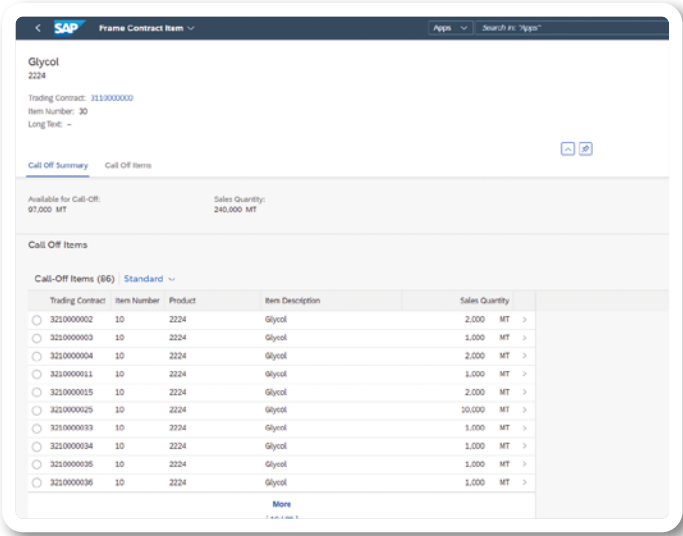

Transparency and efficiency in the call-off process

All available items from the framework agreements are displayed straight away, automatically grouped by trading contracts. This allows users to see at a glance which quantities have already been called off and which are still available.

From the neatly grouped list, simply select the desired item, enter the quantity and delivery date – and the new trading contract is instantly created. The contract number is displayed automatically, so you can continue working with the call-off right away.

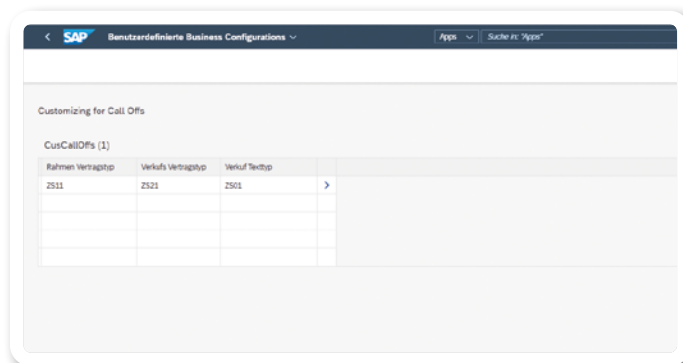

Maximum clarity and control

With just one click, the detail view opens: all relevant header data of the framework agreement is automatically displayed in the preferred language. It also clearly shows how much quantity is still available and which call-offs have already been created. Call-offs that have not yet been released can be deleted at any time with ease – ensuring maximum clarity and full control.

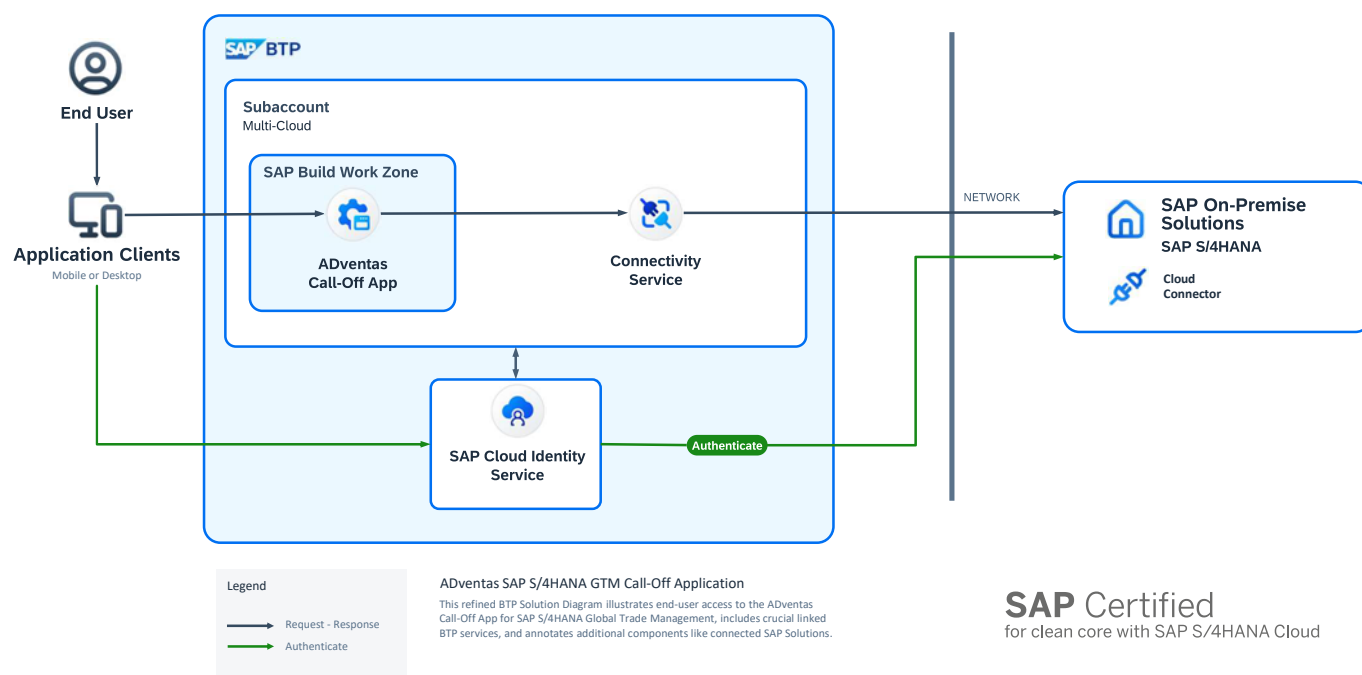

Easy to customize

The app also demonstrates its flexibility in customizing. Using the Custom Business Configurations app, central settings can be adapted to the individual requirements of your company with ease – from the document type of the framework agreement to the document type of the trading contract, and even the preferred text type.

Ready for every environment – today and tomorrow

Technically, the app is built for the future: it is provided via the SAP Build Work Zone on the SAP Business Technology Platform (BTP), making it perfectly usable on any device – whether desktop, tablet, or smartphone. The ADventas Call-Off App is available exclusively for the SAP S/4HANA Private Cloud as of version 2022 and currently supports German and English.
